

Aerocatch Bonnet Latch

Short Description

Aerocatch Bonnet Latch

Description

These AeroCatch Hood latches are a great option that allows you to get away from the standard bonnet pins that stick out of your bonnet and take away from the clean look of your car. These are composite material latches that can be used on bonnet, boot and any other body panels that might need to be quickly removed.

The kit contains 2 AeroCatches and stud strikes, all installation fasteners, rubber bump stops, bonnet cut-out template and 2 keys specific for this latch set.

AeroCatch recommends no more than a 5 degree angle between the pin and the latch.
