

Pump Lube

Short Description

Pump Lube

Description

Pump Lube has been specially formulated for use in methanol/nitro fuel pumps and is a thick viscous fluid that adheres to fuel pump gears for better wear protection. Pump Lube absorbs residual methanol/nitro and leaves a lubricating film to protect against pump gear galling and corrosion. On start-up Pump Lube will readily dissolve in methanol/nitro fuels and can be rinsed off hands or components with water as required.
