

Clear View Filtration Chevy Block Adaptor

Short Description

Clear View Filtration Chevy Block Adaptor

Description

Clear View Filtration block adaptors are machined out of high grade billet aluminium and clear anodised for better protection.

These block adaptors are a high flow design for high pressure and high volume oil systems for today's performance and race engines and have been designed so they will not restrict the flow of oil.

Chevy block adaptors have a directional arrow that points to the front of the engine, it lines up the outlet in the block with the outlet opening in the block adaptor for the best oil flow.
